

Guidelines for Calculating Emissions from Dairy and Poultry Operations

December 2020

The dairy and poultry farms are required to report to the SCAQMD their emissions of Volatile Organic Compounds (VOC), Particulate Matter (PM) and Ammonia (NH₃) that result from the handling of livestock waste. For poultry operations, there are additional PM emissions from bird feed.

1. PROCEDURES

Facilities can estimate their VOC, PM, and NH₃ emissions using the equation:

$$E = Q * EF * (1 - CE)$$

Where,

E = VOC, PM or NH₃ emissions, expressed in pounds per year (lbs/yr)

Q = Throughput is the number of animals per reporting year by animal category. For poultry farms, the throughput is also expressed in tons of bird feed when estimating PM emissions from bird feed.

EF = Uncontrolled emission factors from Table 1 based on the animal categories and materials.

CE = Control effectiveness listed in Table 2 based on the types of manure disposal practices.

Table 1: Uncontrolled Emission Factors^a

Animals/Operations	VOC lbs/head	PM		NH ₃ lbs/head
		lbs/head	lbs/ton	
Dairy Farms:				
Milking Cows	12.8	3.56	---	74.0
Dry Cows	8.7	3.56	---	45.4
Heifers (4-24 months)	6.1	3.56	---	27.8
Heifers (4-24 months) ^b	4.4	3.56	---	27.8
Calf (under 3 months)	4.5	3.56	---	23.6
Mature Cows ^b	6.3	3.56	---	74.0
Poultry Farms:				
Birds Manure	0.02565	0.0308		0.192
Birds Feed	---	---	0.108	---
Swine Farms:				
Swine	4.64	---	---	20.3

a. The emission factors from Table 1 are from the Governing Board Meeting Agenda, October 7, 2011, Appendix I

b. Emission factors for dairy operations with flush lanes that are flushed with water to a holding pond.

c. Milking cow is a cow raised to produce milk

d. Dry cow is a cow of approximately 2 weeks from calving and in between lactation, hence, is not giving milk and is usually kept separately for different feeding

- e. Heifer is a young female calf under 3 years old and has not borne a calf
- f. Calf is a young cow or bull in its first year
- g. Mature cow is a cow that has had one or two calves and which may be more than 3 years old

Table 2- Control Effectiveness^a

Type of Disposal	(VOC & NH ₃) Control Effectiveness	(PM) Control Effectiveness
No Disposal	---	---
Best Management Practices ^c	---	0.20
Manure Sent out of Basin	0.50	---
Composting (open window)	0.385	---
Composting (enclosed)	0.475	---
Digester (plug & complete mix)	1.0	---
Land Application ^d	0.115	---

- a. The emission factors in Table 2 are from SCAQMD Final Staff Report for Proposed Rule 1127 dated August 6, 2004 unless otherwise noted.
- b. This emission factor is from SCAQMD Governing Board Meeting Agenda, October 7, 2011.
- c. Best Management Practices are Class One Mitigation Measures defined in Rule 223, Appendix A, Table 1, subsections E & F, and Table 2, subsections C & D.
- d. Land Application is the use of methods such as tilling, injecting, or plowing that covers animal waste in accordance with NRCS Agricultural Waste Management Field Handbook Chapter 10, Section 651.1102.

2. HOW TO REPORT

VOC, PM, NH₃ emissions must be reported separately for each animal category (i.e., milking cows, dry cows, heifers, birds, etc.). This can be done through the following steps:

1. Determine the annual average number of animals, (Throughput, Q):
 - For a dairy farm, take the annual average number of animals for each animal category from the annual report submitted to the Santa Ana Regional Water Quality Control Board (SARWQCB).
 - For a poultry farm, take the annual average number of birds using your annual recordkeeping report. In addition, the total amount of bird feed used for the same time period is also needed.
2. Select proper emission factors listed in Table 1, (EF):
 - Note that the VOC emission factors are different based on the animal category (e.g., milking cows versus dry cows) and whether the dairy farm has lanes that are flushed with water to a holding pond.
 - Note that the PM emission factors are different based on the source of emissions (bird's manure or feed). There are no VOC or NH₃ emissions associated with bird feed.
3. Select appropriate control effectiveness (CE) from Table 2 based on the type of emissions (i.e., VOC, PM, or NH₃) and manure handling method.
4. Enter the information into the AER Reporting Tool.

EXAMPLE 1:

Last year, a dairy farm facility has reported to the Santa Ana Regional Water Quality Control Board 900 milking cows, 300 heifers (17-14 months) and no calves. The manure is sent out of the basin. This dairy does not have any lanes that are flushed with water to a pond.

STEPS TO REPORT THE EMISSIONS

Image 1: Click **Emission Sources (ES)**. The reporting tool displays existing permitted units (emission sources) as shown at bottom of the image below. If livestock waste handling is not listed, it must be added to the list by clicking [Add New Emission Source](#). In this example, this farm is operated with a permit. Click on the hyperlink [Open](#) for ES#1 which will take user to image 2 below.

Save Cancel

After saving, the program return user to Image 2. Click **“Save and proceed to Process Reporting”** which will take the user to the screen shown in Image 4 for reporting emissions for this emission source.

Image 4: The reporting tool adds a new Process (P1). Click the hyperlink **“Open”** for entering process information such as throughputs, emissions, emission factors, and TACs as shown in Image 5.

The screenshot shows a window titled "Process References" with a table of process data. The table has columns: A/N, Permit No, Permit Device ID, Permit Device Description, AER Device ID, ES Name, ES Group Name, Source Category, Emissions?, Equipment, and ES Status. A row is shown with A/N 445819, Permit No F86880, Permit Device ID, AGOPS DAIRY, AER Device ID ES1, ES Name Animal waste handling, ES Group Name, Source Category Other Processes, Emissions? Y, Equipment Other process equipment, and ES Status Work in progress. Below the table, there is a summary row with columns: Process ID (P1), Source Group (Other Process Emissions), Process/Material/Fuel Name, Status (Work in progress), and Operation Type (routine). The "Process ID" cell contains a red circle around the word "Open". At the bottom left is an "Add Process/Material/Fuel" button and at the bottom right is an "OK" button.

A/N	Permit No	Permit Device ID	Permit Device Description	AER Device ID	ES Name	ES Group Name	Source Category	Emissions?	Equipment	ES Status
445819	F86880		AGOPS DAIRY	ES1	Animal waste handling		Other Processes	Y	Other process equipment	Work in progress

Process ID	Source Group	Process/Material/Fuel Name	Status	Operation Type
P1	Other Process Emissions		Work in progress	routine

Image 5: The hyperlinks **“Open”** are designated for data entry to each section. The first one is for process information as shown in Image 6 below.

The screenshot shows the "Other Processes" reporting screen. On the left is a sidebar with a tree view of reporting sections: Facility Information, Build Reporting Structure, Combustion Fuels, Emission Sources (ES), Report Process/Emissions (selected), Combustion, Use of organics, Storage Tanks, Fugitive Components, Other Processes (selected), Summaries, Data Validation, Print Facility Report, Excel Reports, and Report Submission. The main content area has a title "Other Processes" and a description. Below this are four steps for data entry: Step 1: Process, Step 2: Throughput, Step 3: Criteria Emissions (lbs), and Step 4: Toxic (TAC/ODC) Emissions (lbs). Each step has a table with data entry fields. In Step 1, the "Process ID" field contains "P1" and the "AER Device ID" field contains "ES1", with a red circle around the "Open" link in the "AER Device ID" cell. In Step 2, the "Annual Throughput" field contains "Open". In Step 3, the "Pollutant" field contains "Open". In Step 4, the "TAC/ODC Group" field contains "Open". At the bottom of each step is an "Add New" button.

Other Processes

This reporting screen is for reporting activity data for other processes used in your facility which were not covered in previous reporting screens. Please provide specific information for every associated emission source. You must select Activity and throughput units before reporting emissions. If the operation of such sources involves burning fuels, make sure emissions generated from burning fuels are reported separately. Combined emissions can also be reported here; however, it must be substantiated to avoid double reporting. Detailed instructions are available by clicking on Help icon in the tool bar.

STEPS TO REPORT THE NEXT PROCESS FOR PM EMISSIONS FROM FEEDS.

The following images will illustrate how to report emissions from handling of chicken feed. After saving, the program returns to Image 8. By clicking the **“Back to Emission Source Process Reference”** button at the bottom, the tool will pop up a screen (shown below) for user to add another process. Click **“Add Process/Material/Fuel”** button, name the process (i.e. Chicken Feed), and click OK button next to it.

The screenshot shows the 'Process References' dialog box. It contains a table with columns: A/N, Permit No, Permit Device ID, Permit Device Description, AER Device ID, ES Name, ES Group Name, Source Category, Emissions?, Equipment, and ES Status. Below the table is a section with columns: Process ID, Source Group, Process/Material/Fuel Name, Status, and Operation Type. The 'Add Process/Material/Fuel' button is circled in red. Below it, the 'Process name' field is also circled in red and contains the text 'Chicken feed'. An 'OK' button is next to the field.

A/N	Permit No	Permit Device ID	Permit Device Description	AER Device ID	ES Name	ES Group Name	Source Category	Emissions?	Equipment	ES Status
				ES6	Chicken farm		Other Processes	Y	Other process equipment	Work in progress

Process ID	Source Group	Process/Material/Fuel Name	Status	Operation Type
Open P1	Other Process Emissions	Chicken manure	Work in progress	routine

Add Process/Material/Fuel

Other Process Emissions ▼ Process name: **OK**

OK

After clicking OK, process P2 is added for chicken feed operation as shown below. Click on **“Open”** for P2 and start entering the information for that process.

The screenshot shows the 'Process References' dialog box after adding process P2. The table now has two rows: P1 (Chicken manure) and P2 (Chicken feed). The 'Open' button next to P2 is highlighted. The 'Add Process/Material/Fuel' button is still visible at the bottom.

A/N	Permit No	Permit Device ID	Permit Device Description	AER Device ID	ES Name	ES Group Name	Source Category	Emissions?	Equipment	ES Status
				ES6	Chicken farm		Other Processes	Y	Other process equipment	Work in progress

Process ID	Source Group	Process/Material/Fuel Name	Status	Operation Type
Open P1	Other Process Emissions	Chicken manure	Work in progress	routine
Open P2	Other Process Emissions	Chicken feed	Work in progress	routine

Add Process/Material/Fuel

OK

After clicking P2, the tool will present to user a process data entry screen similar to Image 5 where user can enter information for the steps as shown in the following screens. Use the drop-down arrow at the right of each box to report information for this process as shown below. Click the **Save** button.

Facility ID: 999115 - ABC - Reporting period: 2012

After saving, the program returns to Image 5. Open the **Throughput** section to enter the amount, as shown below. Click **Save** button.

Edit Throughput Information - Other Processes

AER Device ID	Permit Device ID	A/N	Process ID	Rule #	Activity
ES6			P2	1127	Manufacturing : Food and Agricultural : Poultry : Feed Operation

Annual Throughput
100.000000 tons

Annual Throughput: 100.000000 * tons

Throughput Type: Input *

Throughput Comment: based on usage records x

Save Cancel

After saving, the program returns to Image 5. **Open** the **Criteria Emissions** section (by clicking **Add New**) to enter the criteria pollutant (i.e., PM) and its emission factor information, as shown below. Click the **Save** button.

Open Criteria Emission Information - Other Processes

AER Device ID	Permit Device ID	A/N	Process ID	Rule #	Activity
ES6			P2	1127	Manufacturing : Food and Agricultural : Poultry : Feed Operation

Annual Throughput
100.0 tons

Pollutant: PM *

Emission Factor (EF): 0.1080 * lbs/tons

☐ Controlled EF value
(mark checkbox if EF listed represents EF determined after control)

Overall Control Efficiency:

Emission Factor Comment: from Table 1 of Guidelines for Dairy & Poultry Operations

Emission Factor Data Source: AQMD default *

Emissions: 10.80 lbs

Save Cancel

After saving, the program returns to Image 5. Emissions from process P2 are reported. Complete the report by validating the entries.
